PROJECTS

Graduation Project, Inventory Management (Venus company)

September 2021 – January 2022

- Identify key segments and apply modern industrial engineering and management techniques to improve warehousing operations.
- Use cause and effect tools to identify key issues within the warehouse.
- Address problems related to misuse of materials and storage quantities.
- Implement cost-saving measures such as inventory safety systems, minimum and maximum demand planning, and reducing accumulated stock

Supply chain cycle project, Atlanta National Factory

January 2023 – June 2023

- Analyze market opportunities, demand, and competition.
- Assess the impact of external factors (PESTLE analysis) and analyze associated risks and opportunities.
 - Plan and organize supply chain, logistics, warehouse, and inventory management.
 - Develop sales strategies, implement and evaluate their performance, and ensure customer satisfaction.
 - Identify human resources needs, recruit, train, manage, and evaluate performance.
 - Analyze potential risks, evaluate impact and probability, develop risk mitigation strategies, and plan response.

INTERNSHIP

Crown Can Factory, Quality department

March 2022 – May 2022

- Gain a basic understanding of quality control principles and practices in a factory setting
- Monitor statistical processes and develop knowledge and skills in using statistical methods for quality control.
- Learn how to identify and address the root causes of quality problems in a factory
- Continuous improvement in quality management and understanding the principles
